DynEd®

Aviation English Solutions

Developing language proficiency for safety, efficiency and service

Complete solutions for all your Aviation English needs

Expertly designed by Aviation and English language professionals to develop language automaticity where your personnel need it most.

DynEd's complete training solution reduces the time needed by pilots, air traffic controllers, cabin crew, ab-initio trainees and other aviation personnel to improve their English level to ICAO and in-company standards, regardless of their native language.

- Aviation profession-specific courseware produced in collaboration with industry and English language experts

- Award-winning, General English courseware to support the parallel development of the universal language skills required in all communication contexts

- Testing tools to benchmark progress against ICAO and in-company English proficiency standards

- Customized training solutions with distance-based and classroom support options

- DynEd's Train-the-Trainer courses and on-demand academic consultation and IT support

- A skills-based learning platform—more than just an LMS and unique to DynEd—that provides detailed quantitative and qualitative learner management, tracking and automated tutoring of students in their self-study mode

Do you know what ineffective English training costs your organization?

Poor English skills can have a direct effect on operational costs and customer satisfaction. Communication difficulties in the air and during turnaround can result in unnecessary delays and higher fuel expenditures. If cabin crew cannot provide the same quality of in-flight service or 'go the extra mile' for a passenger when speaking English, opportunities are lost in deliverying fully satisfied customers to their destination.

Real fluency as a result of language automaticity

Our interactive courseware and study methods help learners develop real communication skills.

Intense, individual practice measurably improves students' fluency and pronunciation. The 'automaticity' of language production gained by users enables communication even in high-pressure situations.

When brain and muscle memory are trained together to listen and speak without the need to 'think it through', effective communication can be maintained in high-workload situations, protecting the safety envelope and assuring operational and service standards.

Training with DynEd helps you ensure your personnel possess ICAO and in-company standards for English proficiency that:

Allows **Pilots** and **ATCOs** to ensure effective RTF communications for pilots and ATCOs

Allows **Cabin Crew** and **Ground Staff** to enhance customer service and ensure passenger safety

Enables **MRO personnel** to work efficiently and accurately with documentation in English

Allows **ab initio** and **ATCO Trainees** to ensure on time and within-budget completion of training schedules, in-country or overseas

Anytime, anywhere, individualized study solutions with or without Internet

Why DynEd will work for you

DynEd's advanced skill-based solutions adapt to the needs and schedules of aviation personnel and provide complete solutions that adhere to ICAO's best practices.

01 Smart Practice

DynEd's fully interactive courses provide guided self-study options that reduce the need for instructor-student interaction by as much as 70%. With immediate feedback from Study Score indices, advanced Speech Recognition exercises, and built-in Intelligent Tutor function, learners can attain benchmark fluency levels more reliably and in less time compared to other methods.

02 Powerful, kills-based learning platform

DynEd's skills-based learning platform provides detailed quantitative and qualitative information about individual courseware usage. Users can maintain practice habits and routines that guarantee the development of real English skills and more language retention per hour of study. Instructors and managers can track, guide and effectively manage user progress towards established targets.

03 Individual study paths & regular progress checks

DynEd's computer-based Placement Test is correlated to the ICAO LPR scale and all major international standardized tests. With accurate needs-analysis tools, a clearly defined and benchmarked curriculum, dynamic individual study paths, proven practice regimes and regular Mastery Tests, users can achieve their goals with confidence.

05 Accelerated, sustained proficiency gains

DynEd's skills-based approach to developing English fluency follows the natural path of language learning. Individual, guided self- study, combined with instructor-led extension activities in a true blended-learning program, accelerates learner progress and leads to more sustained fluency gains.

06 Adheres to ICAO's best practices

DynEd's Aviation English solution follows the best practices detailed in ICAO's Manual on the Implementation of ICAO LPRs *(Document 9835, Second Edition, 2010), and Guidelines for Aviation English Training Programmes (Circular 323, 2009).*
